Cleaning Clear Anodized Aluminum

Clear Anodized finish is a durable aesthetically pleasing exterior finish. Its matte silver color gives it a nice contrast with the wall color or exterior design. It holds up well to weather and requires very little maintenance. Occasionally, the molding should be wiped clean with a mild cleaner such as 409 or Simple Green using a soft cloth to remove any dirt or dust that has accumulated on the trim pieces. Care must be taken to not use a scouring pad, fine sandpaper or steel wool to clean the pieces as this will permanently stain and scratch the trim piece because the protective seal has been compromised. Should cement slurry or mortar need to be cleaned off, try using Sakrete Mortar and Concrete Dissolver, available at most Grainger locations. Follow the manufacturer's instructions.

Sincerely,

J. Scott Young
